SUMMARY

Backend Engineer (Java/Spring Boot) with 4+ years of experience at Zoho building highly scalable RESTful microservices for a multi-tenant enterprise SaaS product, with full-stack delivery capability (React.js). Optimized PostgreSQL workloads to cut report generation time by up to **70%** and led zero-data-loss major version upgrades. Built a centralized observability platform that reduced MTTR and lowered production support tickets by **30%**. Experienced with cloud architecture patterns, event-driven Kafka systems, AWS, secure SDLC (CVE remediation ownership), and leading a 5-member team.

SKILLS

Backend: Java 17 (Concurrency, Multithreading, Collections, Generics, Stream API), Spring Boot (Spring MVC, Spring Data JPA, Spring Security), Hibernate, C# (.NET), RESTful APIs (OAuth2, JWT, Versioning), JUnit 5, Mockito, Integration Testing

Distributed Systems: Microservices (API Gateway, Service Discovery, Circuit Breaker), Apache Kafka, RPC/IPC

Database & Caching: PostgreSQL (Performance Tuning, Query Optimization, Migration, Maintenance), MSSQL, DynamoDB, Redis

Cloud & DevOps: AWS (EC2, S3, Lambda, RDS, ECS, CloudWatch), Docker, Kubernetes, Jenkins, Git, CI/CD Pipelines, Maven

Frontend: React.js, Ember.js, JavaScript, HTML5, CSS3

Architecture & Practices: System Design (HLD/LLD), Cloud Architecture Patterns, Multi-Tenant SaaS, SOLID, TDD, Agile/Scrum, Security/CVE Mitigation

PROFESSIONAL EXPERIENCE

Zoho Corporation - Software Development Engineer (Member Technical Staff)

July 2022 - Present | Chennai, IN

- Designed and developed highly scalable RESTful microservices using Java and Spring Boot on **AWS (EC2, ECS, S3, RDS)** for a multi-tenant SaaS product serving **200+ organizations**, delivering features end-to-end from schema design and REST APIs to frontend and automated testing.
- Built distributed, event-driven services integrating Java and C# components via RPC, IPC, and Apache Kafka, enabling reliable, high-throughput sync and async communication across **200+ tenant organizations**.
- Designed relational database schemas and optimized PostgreSQL performance through indexing, query optimization, and execution plan analysis, improving report generation performance by up to **70%**.
- Led PostgreSQL major version upgrades across **200+ organizations** hosting terabyte-scale databases, planning backup, restore, and data migration strategies that ensured **zero data loss** and improved database stability and maintainability.
- Developed a centralized observability platform for monitoring asynchronous workflows, scheduled jobs, and multithreaded backend processes, reducing MTTR and lowering production support tickets by **30%**.
- Owned product security initiatives by leading remediation of critical CVEs through dependency upgrades and security hardening; collaborated across teams to implement secure development practices and maintain enterprise compliance.
- Built responsive and reusable frontend components using React.js and Ember.js, delivering consistent user experiences adopted across multiple product modules.
- Owned a product module end-to-end and **led a team of 5 developers**, driving feature design, code reviews, engineering quality standards, mentoring, and production issue analysis from design through deployment.

Zoho Corporation - Project Trainee

March 2022 - July 2022 | Chennai, IN

- Developed metadata extraction utilities for Google Drive and Azure File Storage to evaluate cloud storage integration and migration feasibility.
- Built Active Directory modules supporting enterprise identity and access management (IAM), streamlining authentication and authorization workflows.

EDUCATION

Bachelor of Engineering - Rajalakshmi Engineering College, Chennai, IN | June 2018 - April 2022 | CGPA: 8.56/10

Higher Secondary - Kalaimagal Viddyalaya, Chennai, IN | June 2016 - March 2018

Secondary - Gujarathi Vidhyalaya, Kozhikode, IN | June 2014 - April 2016
